

Technical Perspectives on Analyst's Rating Changes

AGIX case study

02-16-2008

AGIX – The TPARC report for December 7, 2006 pointed out the existence of a persistent long-term downtrend in the stock. The stock had already suffered a major decline but there was more to come. The stock has lost almost all its value since the TPARC report was prepared. The "buy" recommendation on the stock proved to be a disaster.
