

# Technical Perspectives on Analyst's Rating Changes

AHM case study  
08-03-2007

It did turn out to be a major top and a major downside move followed. The market saw the subprime mortgage problems coming and was moving away from the stock more than a year and a half ago. The stock today is teetering on bankruptcy. The Performance Alarm was showing right at yearend 2005. This is another example of the stock price leading the fundamentals.
