

# Technical Perspectives on Analyst's Rating Changes

ANN case study  
02-16-2008

ANN – The TPARC report for November 7, 2006 carried a warning that the pattern could "turn out to be a major top." That is what subsequently happened and the stock has declined by over 50% peak to trough. The stock remained consistently below the 45-degree Bearish Resistance Line for over the next year.
