

Technical Perspectives on Analyst's Rating Changes

ASH – case study
02-24-2008

ASH – The TPARC report from November of 2006, concluded that resistance would probably turn ASH back down and that is what happened. The poor performance has continued and the stock has remained continuously below the 45-degree Bearish Resistance Line ever since it broke down. The stock has lost about a third of its value over the past year and a half.
