

Technical Perspectives on Analyst's Rating Changes

ASPM case study

03-03-2007

ASPM has continued to perform poorly. An initial attempt to create a base failed and the stock broke down. The price is slightly higher than the price at the time the TPARC report was prepared but the stock has lagged the market badly.

ASPM - Rating change from "buy" to "neutral"
There also was a downgrade from "mkt. outperform" to "mkt. perform."

A major top has formed. Trending down. No indications of a reversal.
Performing poorly. Support seems to be failing.
