

Technical Perspectives on Analyst's Rating Changes

BC – case study
02-23-2008

BC – The comment on the TPARC report for August 29, 2005 indicated that the "Sideways consolidation may be a consolidation or a top" and there had been a "Serious loss of upside momentum." It turned out to be a top and the stock has been trending down ever since, losing well over 60% of its value. There were no attempts to rally once the downtrend began and it has remained below the 45-degree Bearish Resistance Line.
