

# Technical Perspectives on Analyst's Rating Changes

CBG case study  
02-23-2008

CBG – The TPARC report from August 30, 2005 indicated that the trend was up. The more recent chart reflects the adjustment for a 3-for-1 split that was paid in 2006. This stock experienced a major move up to the peak in late 2006 to early 2007 when a major trend reversal occurred and a serious downtrend began. The move up was almost a triple in the price of the stock. The subsequent downtrend resulted in a loss of almost 50% in the value of the stock from the peak.
