

Technical Perspectives on Analyst's Rating Changes

CCRT case study

02-03-2008

CCRT – The TPARC report from August of 2006 noted that "everything depends on the support holding the stock up." Sometime late in 2006, the support failed and a major downtrend began. This downtrend carried the stock to a price below \$10 per share. While it is unknown at exactly what price the downtrend commenced, it can be judged that the downtrend resulted in a serious financial loss.
