

Technical Perspectives on Analyst's Rating Changes

CENT case study

01-24-2007

CENT did not decline much in absolute price since the TPARC rating; only a little more than a point, but the relative performance from the date of the TPARC rating was terrible. From the date of 08-04-2006 CENT went down while the overall market rallied about 20%. The stock is still showing poor relative performance.
