

Technical Perspectives on Analyst's Rating Changes

COF case study
02-03-2008

COF – A major top had formed and a Performance Alarm turned on by August of 2006. The subsequent downtrend carried the stock below \$40 per share, almost a 50% loss from peak to trough. The stock has recently reversed the downtrend but it still remains well below the price shown on the TPARC report.
