

# Technical Perspectives on Analyst's Rating Changes

CTX case study  
12-20-2007

CTX – The major top that was mentioned in the TPARC report for March 8, 2006 followed through and a major decline ensued. The stock lost almost two thirds of its value over the next year or so. This downtrend was very persistent and it remained below the 45-degree bearish resistance line for months.
