

# Technical Perspectives on Analyst's Rating Changes

CYPB case study  
01-24-2007

CYPB currently stands one-third below its price when the TPARC was prepared on 09-28-2005 and that represents a substantial recovery from the lows on the relative performance chart. The top was noted on the TPARC report along with the opinion that the stock was in a persistent long-term downtrend of relative performance. The size of the top suggested that serious distribution was underway.
