

# Technical Perspectives on Analyst's Rating Changes

DNA - case study  
02-18-2008

DNA – A major top on DNA was clearly shown on the TPARC report for April 17, 2006. The downtrend has continued, although there was a serious attempt to make a bottom in late 2006, but that bottom failed and the stock went lower. Currently there are strong indications that another base is forming and the stock may be attempting a reversal of the downtrend.
