

# Technical Perspectives on Analyst's Rating Changes

FDX – case study  
02-10-2008

FDX – The TPARC report from October 2005 called attention to the fact that the stock remained below the 45-degree Bearish Resistance Line, signifying a downtrend was still in place. It was also noted that the stock had experienced "violent swings back and forth" and those swings have continued. Although the stock is down only slightly in price, the relative performance over the past two years has been poor.
