

Technical Perspectives on Analyst's Rating Changes

FLE - case study

12-27-2008

FLE – The TPARC report for June 23, 2006 called attention to the downtrend that was showing on the stock and noted that the stock was performing “poorly.” That downtrend has continued and the stock is now almost worthless. This stock has been trending down since late 2005. Once again the analyst dropped his rating but he still rated the stock “neutral” in the face of serious downtrend.
