

Technical Perspectives on Analyst's Rating Changes

FSYS - case study

08-18-2008

FSYS – It has been less than two months since the TPARC report covered the two downgrades on FSYS. The strong uptrend was noted by the report but the stock just got even more extended to the upside and has risen almost 40% over the past two months. There was a period of backing and filling but the uptrend resumed. There were no signs of a top at time of these downgrades.
