

# Technical Perspectives on Analyst's Rating Changes

GES case study

02-17-2008

GES – The TPARC report for November 3, 2005 described GES as in "a strong up trend" with "no signs of a top." From the date of the TPARC to the peak, GES more than tripled after adjusting for a 2-for-1 split in 2007. The split greatly compresses the historical part of the more recent chart.
