

Technical Perspectives on Analyst's Rating Changes

IPG – case study
02-23-2008

IPG – There were no rating changes on IPG until January 10, 2007 and that upgrade triggered coverage in a TPARC report. The stock had been trending down for several years prior to the TPARC report. The downtrend has continued and the stock lost about a third of its value since the report was sent out. This is an example of very bad relative performance.
