

Technical Perspectives on Analyst's Rating Changes

ISRG case study

03-08-2008

ISRG – The TPARC report for November 10, 2005 called attention to the strong up trending channel and the fact that there were no signs of a top. This up trend has continued and the stock has more than tripled in value from the price shown on the TPARC report to its recent high. It remained above the 45-degree Bullish Support Line throughout the trend up. There are now signs of a major top.
