

Technical Perspectives on Analyst's Rating Changes

KBH case study

02-03-2008

KBH – By the time of the TPARC report in early June 2006, KBH had formed a major top and was showing a serious downtrend. The stock was well down from its high when this TPARC was prepared as a result of an analyst's downgrade of the stock. It is estimated that the peak to trough loss approaches 75%
