

# Technical Perspectives on Analyst's Rating Changes

LEG case study  
02-24-2008

LEG – The TPARC report from September of 2005 indicated that LEG had formed a major top and was in a state of "free fall." The downtrend has continued and the stock has performed poorly even though the loss in points is only about 10%. The TPARC made the observation at that time that the stock had low volatility.
