

# Technical Perspectives on Analyst's Rating Changes

LLY case study

02-18-2008

LLY – By the time the TPARC report featured LLY in March of 2006, the stock had been trending down for several years. The downtrend has continued and the stock has remained below the 45-degree Bearish Resistance Line. The poor performance has continued and there are few signs of a reversal, even today.
