

# Technical Perspectives on Analyst's Rating Changes

LPX case study

01-01-2008

LPX – The major top that was identified in December of 2006 preceded a major decline in the stock. LPX lost almost a third of its value after the 12-6-2006 TPARC report. The upgrade by the analyst to buy proved to be a mistake. There have been no buy signals since that report and support has completely failed.
