

Technical Perspectives on Analyst's Rating Changes

LXX – case study
02-23-2008

LXX – The stock dropped 40% the day before this TPARC report was prepared but the stock had been trending down for months before the big drop. The poor performance has continued and the stock has remained below the 45-degree Bearish Resistance Line during the persistent decline. The stock tried to base during 2006 but the BRL turned it back down.
