

# Technical Perspectives on Analyst's Rating Changes

MNI - case study

02-02-2008

MNI – A major top was outlined on the TPARC chart for March 2006 and a "persistent long-term downtrend" was noted. That poor performance has continued up to the present with the stock dropping from over \$50 per share to about \$11 per share, a disastrous down move in the stock. There were no meaningful rallies during the decline.
