

# Technical Perspectives on Analyst's Rating Changes

MNST case study  
02-23-2008

MNST – The top on MNST that was reported in the TPARC report for September 4, 2007 took well over a year to form and for most of that time it looked like a reversal back to the upside was underway. The reversal failed and the stock broke down in the early summer of 2007. This stock was well off its highs but was definitely in a downtrend when the TPARC report was prepared. The stock has continued to perform poorly and it has lost about 25% of its value since the TPARC was sent out.
