MON case study

01-26-2008

MON – The TPARC report in December of 2005 noted that the uptrend had resumed and that there were no signs of a top at that time. Since the TPARC report in December of 2005, MON has enjoyed a spectacular bull run. It should be noted that the stock was split 2-for-1 in July of 2006, so the actual increase was from about \$35 to over \$100.
