

# Technical Perspectives on Analyst's Rating Changes

MYGN - case study  
01-18-2009

MYGN – The TPARC report for February 9, 2006 called attention to the long-term trading range on MYGN but it mentioned that the stock was headed up. The analyst’s “strong buy” rating turned out to be correct. Sometime after the TPARC report was sent out the stock broke out above the top of the trading range and entered a strong up trend. That up trend, though erratic, has persisted over the past couple of years. The stock has remained consistently above the 45-degree Bullish Support Line throughout the move up.
