

Technical Perspectives on Analyst's Rating Changes

OI – case study
03-08-2008

OI – The upside breakout that was referred to in the TPARC report for April 26, 2007 developed into a strong up trend. The stock is up almost 100% since the TPARC report was prepared. Excellent long-term performance and it remained consistently above the 45-degree Bullish Support Line since the breakout was recorded. It appears that the more recent chart reflects a split or some kind of capital adjustment.
