

Technical Perspectives on Analyst's Rating Changes

PRXL – case study

03-08-2008

PRXL – The chart on the right has been adjusted for the recent 2-for-1 stock split. The TPARC report for September 15, 2006 called attention to the strong up trend that had developed. That up trend persisted and the stock has almost doubled in value since the TPARC report was prepared. It has remained consistently above the 45-degree Bullish Support Line throughout the trend up.
