

# Technical Perspectives on Analyst's Rating Changes

RBN - case study

08-24-2008

RBN – The TPARC report for June 29,2007 called attention to a triple top buy signal and that the stock was about to make new highs. There was a 2-for-1 split paid in February 2008 and the earlier chart has not been adjusted for that split. This stock has roughly doubled in price over the past year. The stock remained above the 45-degree Bullish Support Line throughout the move up. This stock has shown excellent long-term performance.
