MARKET DYNAMICS - RELATIVE STRENGTH vs S&P 500  
 QUEST DIAGNOSTICS INC 06/22/2000 71.13 DGX

This chart covers 3.5 years. The persistent uptrend of the past 1.5 years shows clearly.

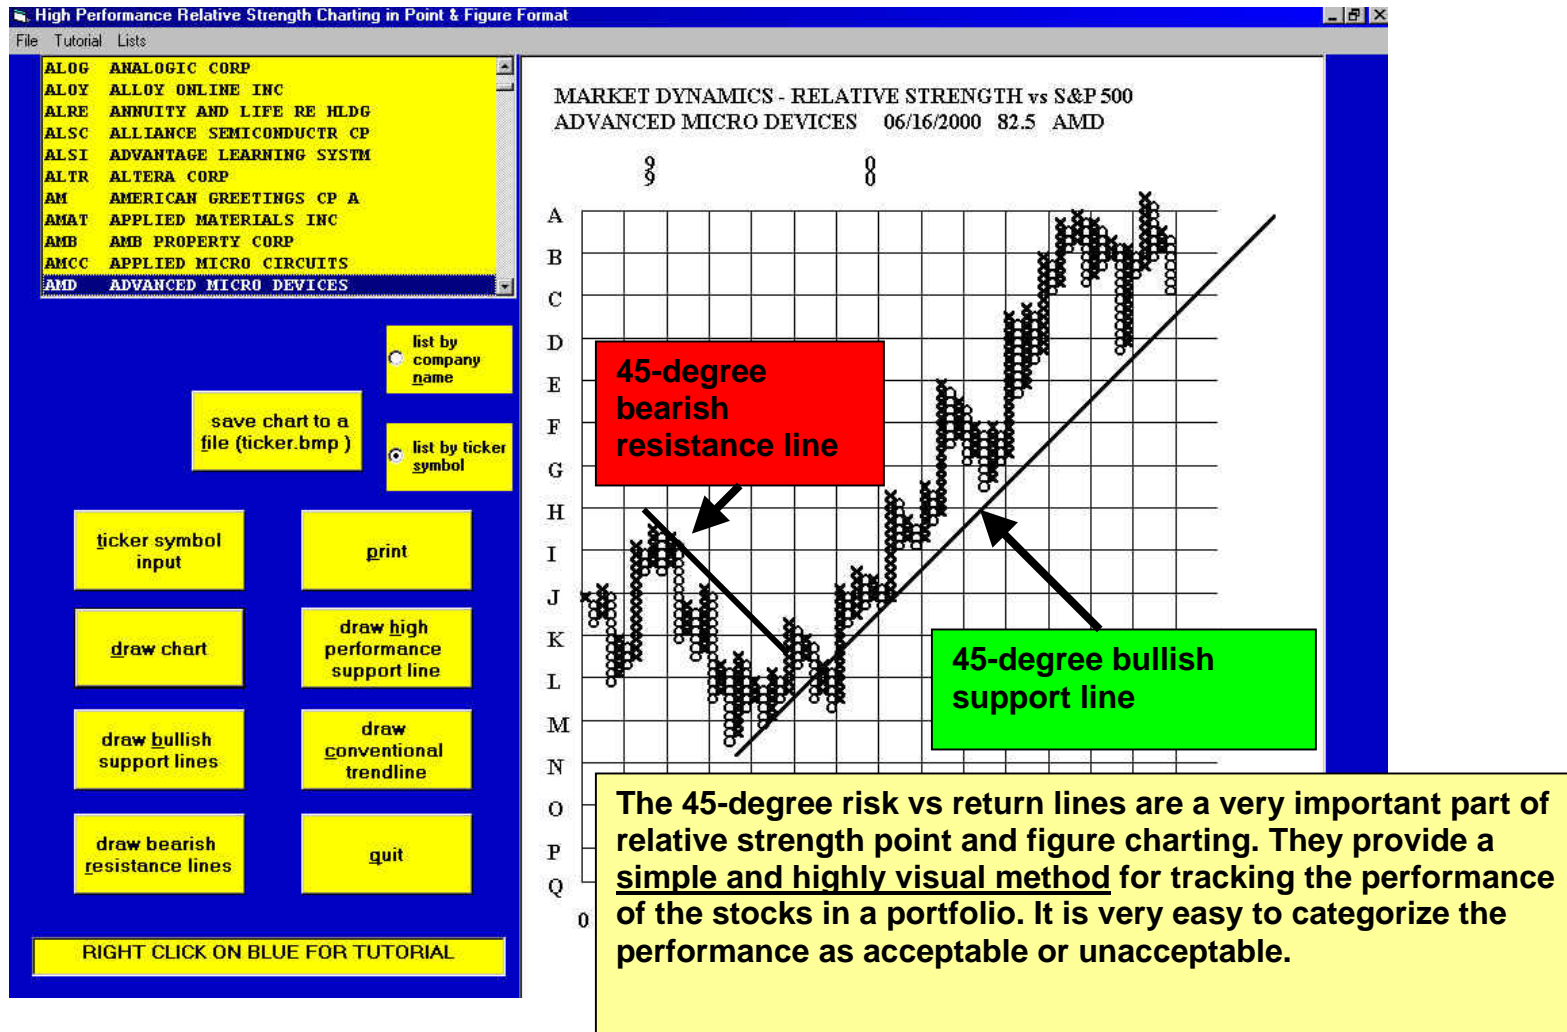

***If your objective is to out-perform a market index then it is important to measure the components of the portfolio in terms of that index. Most large portfolios are measured against the S&P 500. The data must be filtered to eliminate the noise from the market and to focus attention on the long-term major movement. This is the primary reason for tracking relative strength in a filtered point and figure format***

Start | DGA1 | SnagIt/32 | High

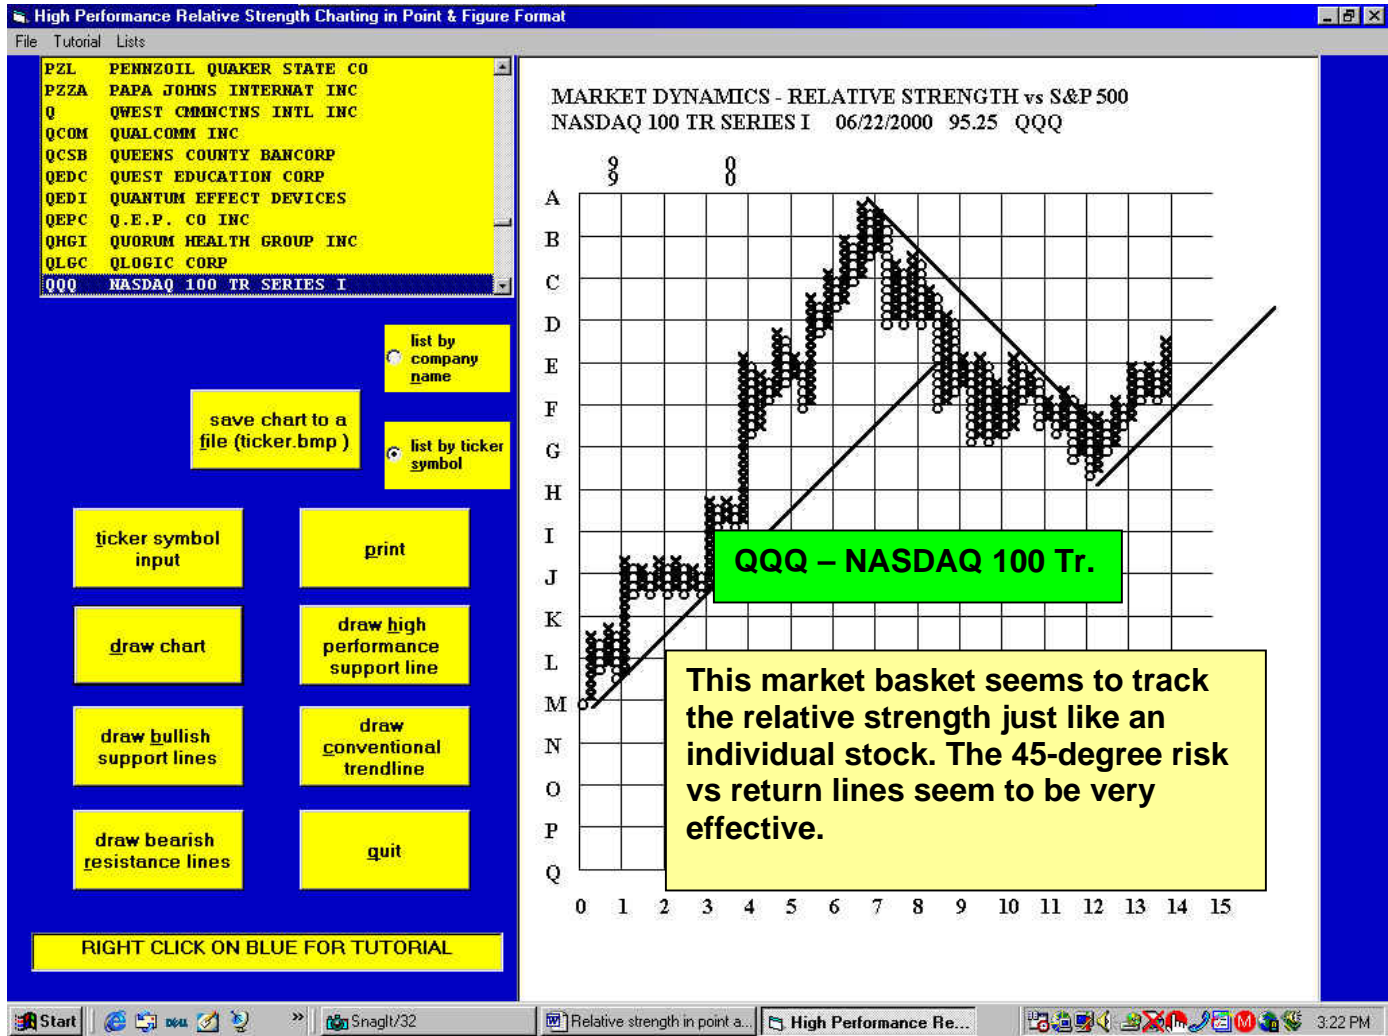

**Combines advantages of each method relative strength with point and figure -Damps out short-term meaningless variation (i.e. noise) - Measures price movement relative to the market - Signal patterns the same - Long-term orientation**

## Support and resistance lines seem to be more effective

# Industry groups and market sectors #1

## Industry groups and market sectors #2

**Rule based system for portfolio management - Simple – highly visual - easy to use – more or less objective – difficult to misinterpret - Retain winners / sell losers quickly.**
