

Technical Perspectives on Analyst's Rating Changes

RTP - case study
11-15-2008

RTP – The TPARC report for April 4, 2008 called attention to the major top on RTP and that the stock was breaking down. This downtrend has persisted and the stock has dropped from \$436 per share to about \$150 per share. There have been no serious upside reversals during the entire decline. The analyst’s upgrade to “outperform” cost investors dearly.
