

Technical Perspectives on Analyst's Rating Changes

TER – case study
02-23-2008

TER – The TPARC report from August 30, 2005 indicated that TER was in a trading range but it was below the 45-degree Bearish Resistance Line, implying a downtrend. The stock tried to build a base but the support broke down in 2006 and a downtrend commenced. The 45-degree Bearish Resistance Line contained the stock and the relative performance has been poor. The stock has lost over a third of its value since the TPARC report was prepared.
