

Technical Perspectives on Analyst's Rating Changes

XTO case study
02-18-2008

XTO – The excellent long-term performance described in the TPARC report has continued. The more recent chart has been adjusted to reflect the recent 5-for-4 stock split. Shortly after the TPARC report was prepared, the stock went sideways for an extended period of time but it remained above the 45-degree Bullish Support Line.
