

# Technical Perspectives on Analyst's Rating Changes

YRCW case study  
01-02-2008

YRCW – The TPARC report for early July 2006 identified a major top on YRCW with a well-established downtrend underway. That downtrend has continued unabated and the stock has dropped from almost \$43 to about \$17. The analyst's upgrade to a "buy" rating was a serious mistake. There are no signs of a turnaround as of year-end 2007.
